

PretrainLab-X Day 4 Scaling Analysis

This report summarizes the recorded experiments. It does not infer model quality beyond the observed loss, token count, and runtime.

Run	Parameters	Steps	Tokens	Final loss	Runtime (s)
300m	336,118,784	8	16,384	8.98883	5.8
700m	653,477,120	4	8,192	9.15800	6.6
fsdp	336,118,784	16	16,384	7.65274	5.3

Observed training loss

Interpretation

A larger parameter count is an engineering scaling axis, not proof of better capability. Compare runs only when data, token budget, optimizer settings, and evaluation protocol are explicitly recorded.
